EDUCATION

New York University — New York, NY

Master of Science in Computer Science

May 2028

University of Georgia — Athens, GA

Bachelor of Science in Computer Science, Summa Cum Laude, Presidential Scholar, Dean's List — GPA: 3.97/4.00

Relevant Coursework: Algorithms, Computer Networks, Computer Architecture, Operating Systems, Database Management, Web Programming, Data Structures, Theory of Computing, Systems Programming, Software Development, Human-Computer Interaction, Software Engineering

May 2025

TECHNICAL SKILLS

Languages: Java, JavaScript, Python, C, C++, SQL, HTML, CSS, Lua, MIPS Assembly

Tools & Technologies: React, Next.js, Node.js, Express, MongoDB, PostgreSQL, Redis, Docker, WebSockets, REST APIs, JWT Authentication, OAuth 2.0, Git, GitHub, Expo

PROJECTS

Riff

React Native, Expo, JavaScript, Node.js

- Built a social ranking app for music based on the app Beli and replaces star ratings with a pairwise comparison-based ranking engine, placing a song in a 100-track library in ~7 head-to-head questions instead of 100, a 93% reduction in required user input.
- Engineered a keyless REST client over the iTunes Search API spanning 4 entity types with request cancellation and response normalization; diagnosed and fixed a de-duplication defect that silently discarded alternate releases and raised reachable tracks per artist by 700% from 25 to 200.
- Built a debounced, abortable search layer with a stale-response guard, cutting network calls 85% on a typical query and eliminating out-of-order result flicker

Market Alerts

FastAPI, Docker, PostgreSQL, SQLAlchemy, Alembic, Redis, WebSockets, Python

- Built a real-time market data pipeline that streams live cryptocurrency prices to connected clients over WebSockets with an update delivery latency of sub-150ms, replacing traditional client-side polling.
- Designed a relational schema with SQLAlchemy models and Alembic-managed migrations enforcing referential integrity between users and their price alerts.
- Implemented an async background service that polls a third-party pricing API and publishes updates through Redis Pub/Sub, decoupling data ingestion from client delivery and avoiding redundant external calls.

Superhero Care

React, Node.js, Express, MongoDB, Java

- Developed an elderly-care matchmaking platform to connect seniors with caregivers.
- Integrated OAuth 2.0 authentication and the Google Calendar API for automated, availability-based scheduling across users.
- Diagnosed and resolved a concurrency bug where booking state failed to sync to the database under load; refactored request handling to ensure consistent updates across 10+ simultaneous users.

EXPERIENCE

Identity Solutions Tech, NYU IT (GOIS) — New York, NY

Aug 2026 – Present

- Audit single sign-on configurations for SAML 2.0 and OIDC/OAuth 2.0 integrated applications within the Global Office of Information Security's Identity & Access Management team.
- Review and maintain knowledge base articles documenting identity and access management processes for the university community.
- Provide operational support for Privileged Access Management (PAM) systems and troubleshoot client-reported SSO and access issues.

Barista, Happy Lemon — Athens, GA

Mar 2024 – May 2025

- Managed multiple concurrent tasks and prioritized effectively in a high-volume, fast-paced customer service environment.

Nail Technician, Lisa's Nail Salon — Douglasville, GA

Nov 2018 – August 2026

- Delivered high-quality, detail-oriented service while adapting techniques to individual client needs and preferences.

LEADERSHIP & ACTIVITIES

EnKore Dance Crew, University of Georgia

May 2022 – May 2025

- Progressed from External Affairs Officer to Dance Captain to President over three years, taking on increasing leadership responsibility within a competitive dance organization.
- As President and Dance Captain, led all team activities, events, and logistics; coordinated rehearsal schedules and directed choreography for the full roster.
